ONLINE TRAINING

Alarm Reporting and Analysis

ONLINE TRAINING COURSE

Course Objectives

Exaquantum/ARA (based upon EEMUA 191) is a valuable tool which helps managers to assess and monitor process and system alarm behaviour. The information provided helps diagnose many causes of operator overload and provides benchmarks for system improvement. This course covers the installation, configuration, administration and use of the Exaquantum Alarm Reporting and Analysis package.

Prerequisite Knowledge

This course assumes that the user is familiar with Microsoft Windows and the basic Microsoft Windows terminology. It also assumes that you are familiar with all the major features of Exaquantum. Knowledge of SQL Server Management Studio would also be useful but is not essential.

Who Should Attend

This course is designed for those users who wish to get more familiar with the Exaquantum Alarm Reporting and Analysis product.

Duration: 18 Hours

Program

- Introduction and Overview
- Installation
- Configuring Exaquantum/ARA
- CENTUM VP CAMS Integration
