

## Can Exaquantum/Batch obtain master recipe data from customers who are not running CENTUM CS3000 or CENTUM VP Batch?

Automatic Batch Data Collection is designed to integrate with CENTUM CS3000 BATCH or CENTUM VP BATCH. It reads the master recipe data directly from the Engineering Stations.

The OPC/BATCH R2.0 standard is not supported and therefore it is not possible to obtain Master Recipe information from any other batch control system.

Integration with any other batch control system is not supported.
