Can we integrate LIMS data into Exaquantum/Batch?

Exaquantum/LDX provides the ability to integrate LIMS Systems in Exaquantum. This places LIMS data into Exaquantum Tags. LIMS data can then be configured as Batch Trend Tags for suitable units.

This will then make the data available for Trending in BatchWeb and Reporting.

See the Product Documentation Page http://www.ymx.yokogawa.com/support/eu-supdoc.htm for further details regarding the Exaquantum/LDX product.
