

## How do I find/reconfigure the location in to which Exaquantum/Batch Excel Add-in inserts the Batch UID?

The Exaquantum/Batch Excel Add-in uses a named range called EqBBatchUID and configures this to point to the cell that contains the Batch UID. This names range is created when you use the Batch or Trend Data Selectors for the first time.

To select this cell you can use the drop down list in the top left hand corner of the sheet (see below).

	EqBBatchUID		30
	A	B	C
1	30		
2			

Once you have selected the cell you can either enter a new batch UID if this is known or double clicking in the cell will reload the Batch Selector tool and allow a new batch to be selected.

**Exaquantum /Batch Releases Affected**
