Is it possible to use Exaquantum PIMS functionality with Exaquantum/Batch installed?

Yes. Exaquantum/Batch requires Exaquantum PIMS on both clients and the server. All Exaquantum PIMS functionality is therefore available for use.

However, the only features of Exaquantum PIMS required to be configured are

- An OPC gateway through which the Equipment and Control Recipe (Batch) Data will be read. This must be an Exaopc Station, which has been purchased with the Batch option (SB1).

- Tags for use in Batch Trends if this feature is required.

There is no supported way to display Batch Data in Exaquantum/Explorer and it is not possible at all to display Batch Data in Web Graphics.
