

What kinds of reports can be created with Exaquantum/Batch?

Exaquantum/Batch contains 5 report templates that are ready to be used including a Batch End and Daily Batch Report. It also contains a further 7, which are examples that can be easily modified to meet the needs of many customers. These include reports that include trend data as well as batch data.

These templates can be modified to meet any specific requirements.

Changing the report templates or creating new ones will require knowledge of Excel, Microsoft Query and the QBatch views.

More complex reports with data from multiple views, trend data, event data and reports that can use parameters will require knowledge of Visual Basic for Applications (VBA).

Other reporting packages such as Crystal Reports can also be used to generate reports outside the regulatory framework of the Exaquantum/Batch Reporting Service.

A two-day training course is available which covers all aspects of Report Design and Scheduling. For details, see the course catalogue online at <http://www.ymx.yokogawa.com/training.html>.
