

Does Exaquantum/Batch Support Standard Model Security?

No, it is not possible to install the Exaquantum/Batch software on an Exaquantum System that has been installed using Standard Model Security. You must install the prerequisite version of Exaquantum for the Exaquantum/Batch Release that is to be installed using Legacy Model Security.

It is possible however to communicate with and get data from CENTUM CS3000 and CENTUM VP and Exaopc Servers running in Standard Model security.

The required manual steps are documented in the technical note for Installing Exaquantum/Batch R2.50 on Exaquantum R2.60 and Installing Exaquantum/Batch R2.50 on Exaquantum R2.70 (see <http://www.ymx.yokogawa.com/support/eu-suptechnotesbatch.htm> for details) and in the release notes for Exaquantum/Batch R2.50.30 and R2.50.40 (see <http://www.ymx.yokogawa.com/support/eu-supdoc.htm> for details).

It is not supported for any earlier version of Exaquantum/Batch.

Exaquantum /Batch Releases Affected
R2.50 with patch R2.50.03 and above
