

## Can I install the product from a network location?

The Exaquantum Installation Guide does not support installation from a network location but some users may have to use this method for operational or technical reasons. If you wish to install from a network location you will need to run the Setup.exe applications for the particular configuration you require directly.

To install a Combined (Data and Web) Server, navigate to the Server Folder and double click Setup.exe

To install a Data Server, navigate to the Server Folder and double click DataServer.cmd

To install a Web Server, navigate to the Server Folder and double click WebServer.cmd

To install a Client, navigate to the Client Folder and double click Setup.exe

To install a Web Client, navigate to the Web Client Folder and double click Setup.exe
