What virus checker is recommended for Exaquantum?

YMX do not support or recommend any virus checking software.
However, all of the computers at YMX run McAfee VirusScan Enterprise 8.8.0 and no problems have been encountered due to the virus checker. This virus checking software is also used for all English language testing at YHQ. YMX have no experience of running Exaquantum with any other virus checkers.

Please note that the nature of SQL Server databases with the heavy throughput of data means that virus checkers could potentially impair performance and therefore YMX suggest that the data files of SQL Server are excluded from virus checking software.
